

DISINFECTION MATS

For over 15 years we produce disinfectant mats that meet the highest hygiene requirements. They provide an independent place of decontamination. Easy to clean, ergonomic and practical. Mats should be regularly replaced with new ones because in places with big traffic and lots of dirt they can become a source of infection. Our mats meet the economic expectations of our customers, because we put on a good relationship price - quality

QUALITY AND DURABILITY AT A REASONABLE PRICE

Our latest product is a mat made of polyurethane foam protective cover made of thin tarpaulin and strong mesh which is the top of the mat. The zip in the mat makes it possible to remove the absorbent body for washing or replacement. This makes it easier to keep the mat clean.

HOW TO USE:

The mat should be soaked in disinfectant. We recommend products like ULTRADES or VIROPOL at a concentration of 1-2%. Replenishing and cleaning mats should be carried out depending on traffic and to maintain adequate moisture mat and effective disinfection of shoes and wheels. We suggest to perform cleaning 1x per week (washing with a pure water from a hose, the pressure of 3-5 bar) while replenishing the solution performed 2-3 times a week.

Available size	60cm x 60cm	100cm x 60cm	200cm x 120cm
Capacity	2 ltr of solution	4 ltr of solution	10 ltr of solution

It is possible to produce a custom-sized mat .

Application:

poultry farms , hatcheries , cowsheds , barns , mushroom farms , greenhouses , food processing,
